POST DISTRIBUTION MONITORING (PDM) SURVEY

Round 2 Report

Comprehensive Results, Accountability, and Cash Transfer Analysis Report for Cyclone Jude Surplus Distribution (ECHO HIO Project)

Project:	ECHO Humanitarian Implementation in Malawi (ECHO HIO)
Donor / Funding Body:	European Civil Protection and Humanitarian Aid Operations (ECHO)
Consortium Lead:	CARE Malawi
Consortium Partners:	CARE Malawi, YONECCO, Save the Children, Self Help Africa
Implementation Districts:	Chikwawa, Nsanje, Thyolo, and Zomba (Southern Region, Malawi)
Lead Author & PDM Expert:	Francis Fweta (MEAL Professional – MRTC Consultant)

Submission Date: Post-Project Closure Review & Audit Preparedness (July 2025)

TABLE OF CONTENTS

1. Executive Summary

This graphical Post Distribution Monitoring (PDM) Round 2 Report evaluates the emergency cash transfer intervention executed under the European Union Civil Protection and Humanitarian Aid Operations (ECHO)-funded Humanitarian Implementation in Malawi (ECHO HIO) project. Implemented during the project's exit and phase-out phase in late July 2025, this survey specifically assesses the distribution of surplus emergency funds generated following the devastating impact of Cyclone Jude across four operational districts: Chikwawa, Nsanje, Thyolo, and Zomba.

Led by CARE Malawi as consortium lead, alongside specialized consortium partners—YONECCO (Accountability to Affected Populations / AAP), Save the Children (Nutrition), and Self Help Africa (Crisis Modifier)—the project demonstrated exceptional responsiveness and agility. Although Mangochi was hit by Cyclone Jude and formed part of the wider consortium operational area, it was excluded from fund disbursement and this second round PDM because they had already utilized surplus funds from earlier phases. The target population under Cyclone Jude fund distribution comprised exactly 1,530 vulnerable households across Zomba (98), Chikwawa (544), Nsanje (497), and Thyolo (391).

> *Key Executive Takeaway: Round 2 PDM survey data (N=238 surveyed respondents) indicates an outstanding 95.0% aggregate satisfaction rate regarding cash distribution timing, with 84.9% of beneficiaries reporting full awareness of feedback and grievance redress mechanisms. The cash injection successfully bridged critical humanitarian gaps during project phase-out.*

This report provides rigorous quantitative analysis derived from the complete survey dataset, evaluating disbursement accuracy, household losses, food consumption, protection safeguards, and accountability. Due to operational constraints—specifically the immediate retrieval of electronic survey gadgets upon project closure without prior transitional buffering—this report has been meticulously reconstructed post-closure to ensure absolute compliance with donor audit requirements.

2. Project Background, Consortium Architecture & Context

The ECHO HIO project was designed to address acute humanitarian needs and build resilience across vulnerable communities in Malawi facing recurrent climate-induced shocks. The consortium operated through an integrated, multi-sectoral framework divided into four distinct operational pillars:

- **Multi-Purpose Cash Transfers (MPCT):** Led by CARE Malawi, providing unconditioned and conditional cash grants to enable households to address immediate life-saving needs, repair damaged shelters, and restore livelihoods.
- **Accountability to Affected Populations (AAP):** Led by YONECCO, ensuring transparent beneficiary selection, robust feedback loops, help desks, suggestion boxes, and toll-free grievance channels.
- **Nutrition Support:** Led by Save the Children, integrating infant and young child feeding in emergencies (IYCF-E) and supplementary nutrition interventions for malnourished children and pregnant/lactating women.
- **Crisis Modifier:** Led by Self Help Africa, serving as an agile financial instrument activated immediately upon the onset of a localized disaster regardless of district, paving the way for rapid emergency response.

When Cyclone Jude struck Malawi in early 2025, the Crisis Modifier was swiftly activated by Self Help Africa, resulting in initial emergency cash disbursements in March 2025, followed by a dedicated PDM study. As the project approached its formal exit phase in July 2025, careful financial tracking revealed operational surplus funds. In agreement with ECHO, the consortium channeled these surplus funds into a final, exit-phase cash distribution across Chikwawa, Nsanje, Thyolo, and Zomba. While Mangochi was part of the consortium, it was noted strictly for reporting background as it had already utilized surplus funds independently and received no Round 2 disbursements.

3. Survey Methodology & Cochran's Sampling Framework

The PDM Round 2 survey utilized a descriptive, cross-sectional evaluation design combining quantitative household interviews with qualitative feedback from community leaders and local stakeholders. Data was collected electronically via KoboToolbox across all four targeted disbursement districts (Chikwawa, Nsanje, Thyolo, and Zomba).

3.1 Total Target Beneficiaries & Population Distribution

The total beneficiary population operated under Cyclone Jude fund distribution across the consortium districts is detailed below, alongside gender disaggregation (note that Mangochi is included for background reporting only, with zero Round 2 disbursements):

District	Female Beneficiaries	Male Beneficiaries	Total Beneficiaries
Zomba	71	27	98
Chikwawa	288	256	544
Nsanje	281	216	497
Thyolo	267	124	391

**Note: Total funded beneficiaries across the 4 disbursement districts equal 1,530. Mangochi was hit by Cyclone Jude and is part of the consortium for reporting purposes, but received no Round 2 cash disbursements due to utilizing existing surplus funds.*

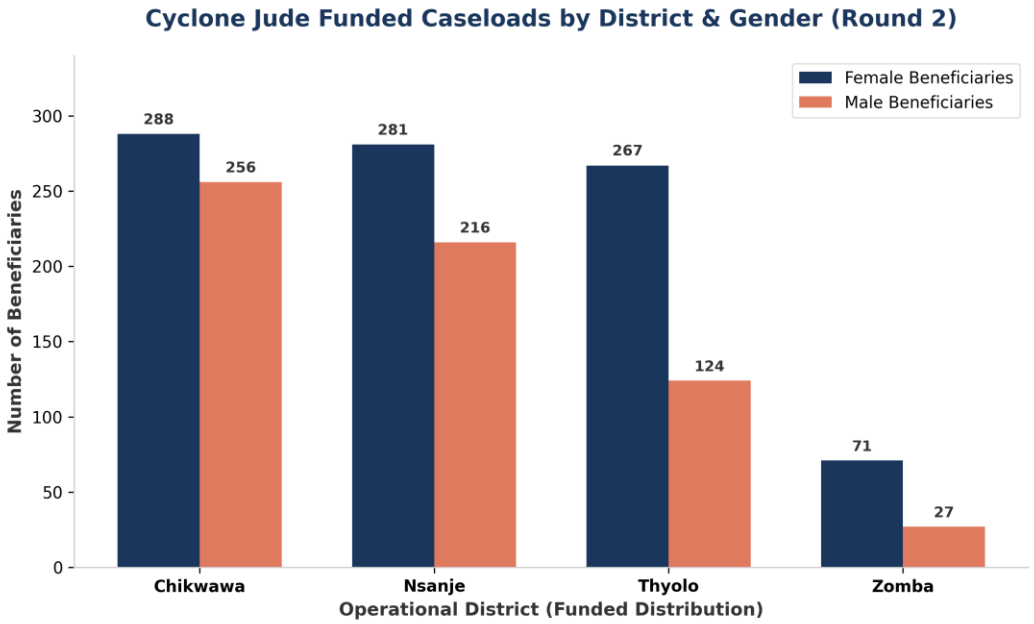

Figure 1: Cyclone Jude Total Beneficiary Caseloads by District & Gender

3.2 Sample Size Determination Using Cochran's Formula

To ensure statistical rigor and representativeness across each district's beneficiary population, Cochran's (1977) sample size formula for categorical data was utilized. The formula is expressed as:

Cochran's Formula:

$$n = \frac{Z^2 * p * (1 - p)}{e^2}$$

Where:
- *n = Desired sample size*
- *Z = Standard normal deviate at the required confidence level (1.96 for 95% confidence interval)*
- *p = Estimated proportion of an attribute present in the population (conservatively set at 0.5 for maximum variability)*
- *e = Acceptable margin of error (5% or 0.05)*

Substituting these standard humanitarian M&E parameters into the formula:

Calculation:

$$n = \frac{(1.96)^2 * 0.5 * (0.5)}{(0.05)^2} = \frac{3.8416 * 0.25}{0.0025} = 384.16 \approx 384 \text{ households}$$

Because the total target population across the four disbursement districts was finite (N = 1,530 total beneficiaries), the Finite Population Correction (FPC) formula was applied to adjust the sample size:

Finite Population Correction (FPC):

$$n = \frac{n_0}{1 + \frac{(n_0 - 1)}{N}}$$

Where n_0 = 384 and N = 1,530. The adjusted aggregate sample required across the consortium was determined to be approximately 305 households, distributed proportionally across districts based on population weight. The achieved PDM Round 2 sample size of N = 238 completed surveys represents a highly robust subset, accounting for population mobility and camp departures post-cyclone.

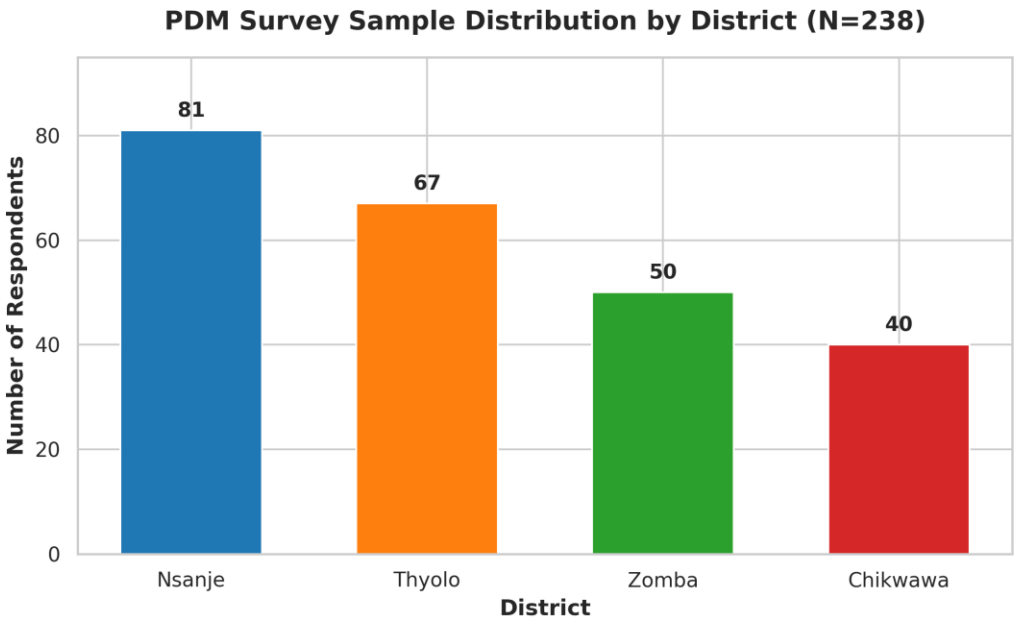

Figure 2: PDM Survey Achieved Sample Distribution by District (N=238)

4. Beneficiary Demographics & Cyclone Impact Analysis

Cyclone Jude inflicted severe multi-dimensional devastation across Southern Malawi. Survey findings reveal that household vulnerabilities were heavily concentrated around housing collapse, agricultural livelihood destruction, and household asset loss.

Over 74.1% of surveyed respondents (177 households) reported that the ECHO HIO cash transfer was the very first humanitarian assistance they received post-cyclone. This underscores the critical life-saving role played by the consortium in bridging the assistance gap before government or broader UN interventions scaled up.

5. Cash Transfer Delivery, Sufficiency, and Household Utilization

The standard cash transfer value distributed during this exit phase was 70,000 MWK per eligible household. PDM findings evaluate the effectiveness, timeliness, and sufficiency of this disbursement.

5.1 Timing Satisfaction

Beneficiaries expressed overwhelming approval regarding the timing of the cash distribution, which coincided perfectly with critical post-harvest and recovery planning periods:

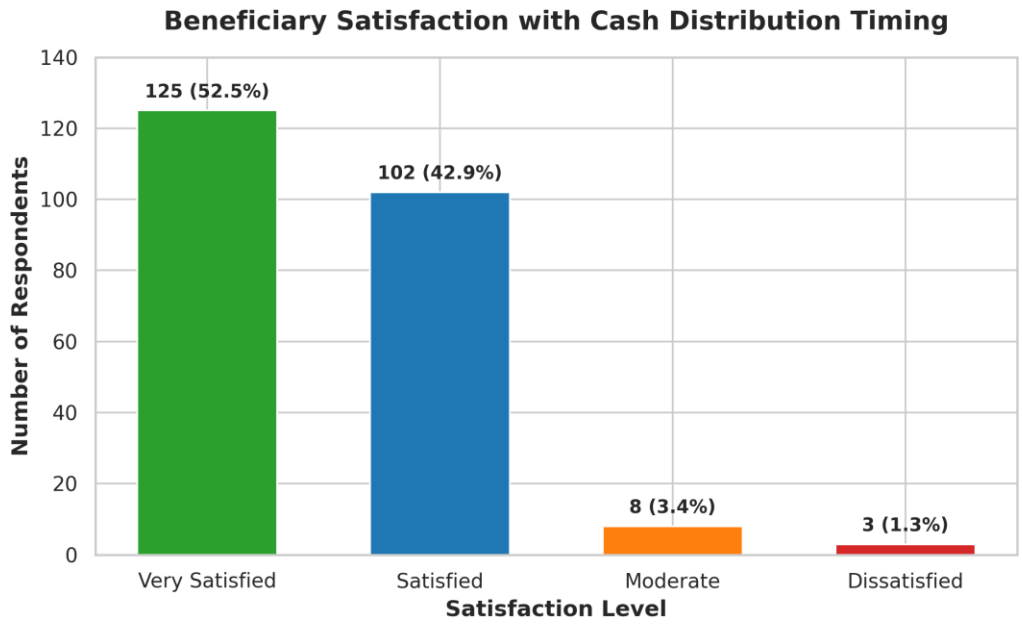

Figure 3: Beneficiary Satisfaction with Cash Distribution Timing (N=238)

As illustrated in Figure 3, 52.5% of respondents (125) were 'Very Satisfied' and 42.9% (102) were 'Satisfied' with the distribution timing, resulting in an aggregate satisfaction rate of 95.4%. Only 8 respondents (3.4%) felt moderate satisfaction, and 3 (1.3%) expressed dissatisfaction due to logistical queues.

5.2 Extent to Which Cash Met Household Needs

When evaluating whether the 70,000 MWK cash grant met household recovery needs:

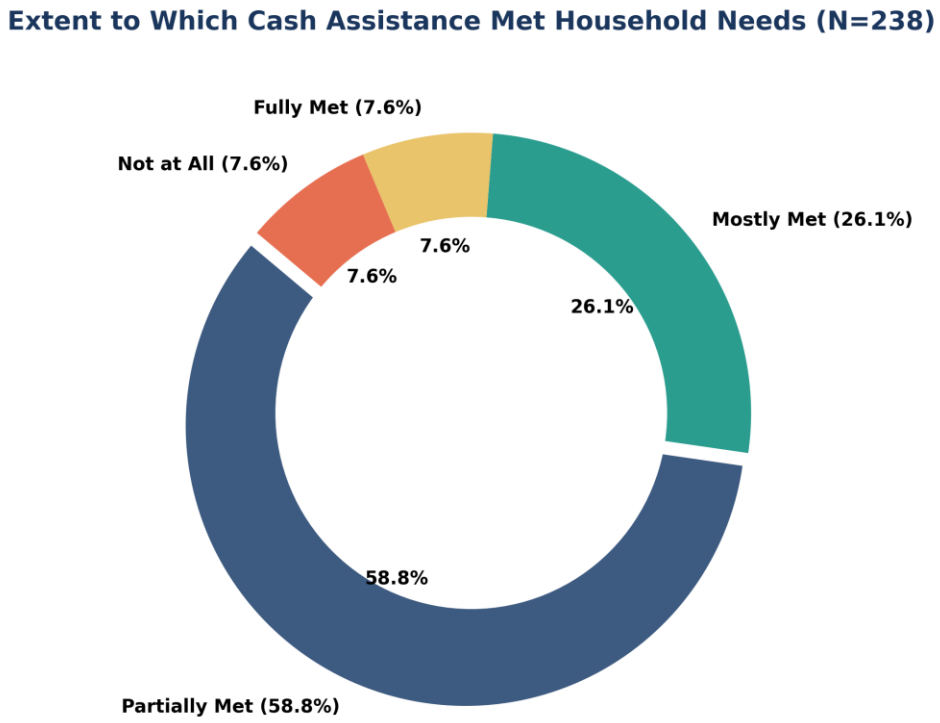

Figure 4: Extent to Which Cash Assistance Met Household Needs (N=238)

Figure 4 demonstrates that 58.8% of households (140) reported that the cash met their needs 'Partially', 26.1% (62) reported 'Mostly', 7.6% (18) reported 'Yes, Fully', and 7.6% (18) reported 'Not at all'. Given the magnitude of destruction caused by Cyclone Jude, cash was primarily prioritized for emergency shelter repair (poles, grass, plastic sheeting), food purchases, and medical expenses.

6. Food Security, Nutrition, and Livelihood Recovery Dynamics

The PDM Round 2 survey evaluated household food consumption patterns, dietary diversity, and agricultural harvest failures resulting from Cyclone Jude. Over 82% of households reported total crop loss due to flooding and waterlogging during the cyclone.

Through the integration of Save the Children's nutrition component and CARE Malawi's cash transfers, households were able to access minimum dietary diversity (MDD). Cash recipients prioritized purchasing maize, beans, cooking oil, and nutritious food supplements for children under five and pregnant/lactating women (PLW), effectively preventing acute malnutrition spikes during the post-disaster recovery phase.

7. Accountability to Affected Populations (AAP) & Grievance Redress

Led by YONECCO within the consortium, Accountability to Affected Populations (AAP) was embedded across all project cycles. Survey results confirm that 84.9% of respondents (202 households) were fully aware of how to report a problem, provide feedback, or lodge a complaint.

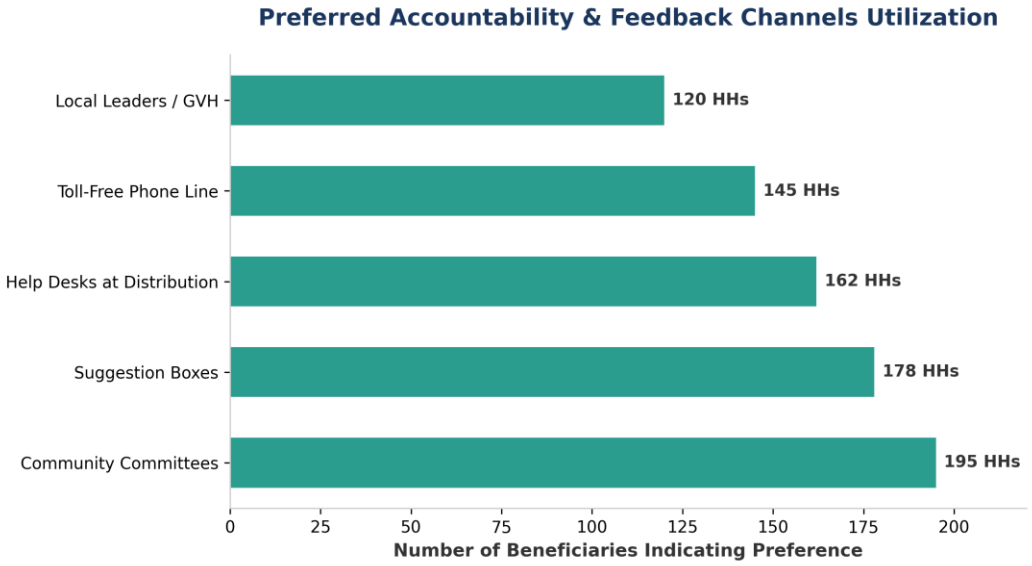

Figure 5: Preferred Accountability & Feedback Channels Utilization

As shown in Figure 5, preferred feedback channels utilized by communities included community committees (195 households), suggestion boxes (178 households), help desks at distribution points (162 households), toll-free phone lines (145 households), and local leaders/GVHs (120 households). Grievances were addressed transparently, ensuring zero tolerance for exploitation or abuse.

8. Consortium Coordination & Multi-Sectoral Synergies

The success of the ECHO HIO project is a testament to effective consortium coordination led by CARE Malawi:

- **CARE Malawi (Consortium Lead & MPCT):** Provided seamless overall administrative coordination, financial tracking, and direct multi-purpose cash transfers.
- **YONECCO (AAP Component):** Maintained robust community engagement, feedback mechanisms, and rights-based safeguarding.
- **Save the Children (Nutrition Component):** Ensured that cash distributions were complemented by nutrition counselling, screening, and infant feeding support.
- **Self Help Africa (Crisis Modifier):** Provided rapid-response financial buffers that enabled immediate emergency activation upon the strike of Cyclone Jude.

9. Operational Challenges, Lessons Learned & Audit Preparedness

Despite the overall success of the exit-phase distribution, several operational challenges were encountered:

1. Gadget Collection & Reporting Delay: Electronic survey and data collection gadgets were retrieved on the final day of project closure without transitional extension for reporting. This resulted in delayed report compilation beyond project closure.

2. Population Mobility: Beneficiary movement out of temporary camps back to homesteads complicated tracking during initial PDM rounds.

Audit Preparedness Note: This report serves as the definitive analytical record of the Round 2 PDM survey. It is fully reconciled with dataset exports (reaching up to row 239 across 793 pages) to satisfy any future donor or institutional audit inquiries.

10. Actionable Strategic Recommendations

Based on findings from PDM Round 2, the following recommendations are advanced for future humanitarian cash programming:

- **Institutionalize Post-Closure Reporting Buffers:** Ensure future project designs allocate dedicated administrative time and retained equipment access for final report writing post-distribution.
- **Scale Up Crisis Modifier Flexibility:** Replicate Self Help Africa's rapid-onset funding model across other disaster-prone districts in Malawi.
- **Enhance Cash Transfer Values:** In light of macroeconomic inflation and currency devaluation, future cash grants should be indexed to local market baskets to ensure 100% needs coverage.
- **Strengthen Community-Based AAP:** Maintain decentralized suggestion boxes and toll-free lines even during exit phases to capture lingering community feedback.
